## Understand Fraction Multiplication

Name: $\qquad$

## Prerequisite: What does it mean to multiply numbers?

## Study the example shows ways to describe multiplication. Then solve problems 1-8.

## Example

Use words and models to show $5 \times 3=15$.

5 groups of 3 is 15 .

15 is 5 times as many as $3 .$\begin{tabular}{|c|c|c|c|c|}

\hline \multicolumn{1}{|c|}{3} \& \multicolumn{4}{|c|}{| 3 | 3 | 3 |
| :---: | :---: | :---: |} <br>

\hline
\end{tabular}

1 Complete the sentences to describe the multiplication
that the picture shows.

Words: $\qquad$ groups of $\qquad$ is $\qquad$ -.

Equation: $\qquad$ $\times$ $\qquad$ $=$ $\qquad$
2 Use the bar model at the right to complete the sentences.

Words: $\qquad$ is $\qquad$ times as many as $\qquad$ .

Equation: $\qquad$ $\times$ $\qquad$ $=$

## 6

| 6 | 6 | 6 | 6 |
| :--- | :--- | :--- | :--- |

3 How is $6 \times 4$ related to $4 \times 6$ ? $\qquad$

## Solve.

4 Complete the sentences to describe the multiplication that the array shows.

$\qquad$ rows of $\qquad$ is $\qquad$ .
$\qquad$ $\times$ $\qquad$ $=$ $\qquad$

5 Draw and label a bar model to show $5 \times 9$.

6 Nick read 7 books last month. He read twice as many books this month. Draw a bar model that represents the number of books Nick read this month.

7 Look at problem 6. Write the multiplication equation that the bar model describes.
$\qquad$

8 Write a word problem that could be modeled by the equation $3 \times 6=18$.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Show Multiplying Fractions

Study how the example shows how to multiply fractions. Then solve problems 1-9.

## Example

Find $5 \times \frac{3}{4}$.
You can use repeated addition.

$$
\frac{3}{4}+\frac{3}{4}+\frac{3}{4}+\frac{3}{4}+\frac{3}{4}=\frac{15}{4} \quad \frac{15}{4}=3 \frac{3}{4}
$$

You can draw a model.

$5 \times \frac{3}{4}$
$5 \times \frac{3}{4}=\frac{15}{4}=3 \frac{3}{4}$

1 Find $6 \times \frac{1}{4}$ using repeated addition.
$\qquad$ $+$ $\qquad$
$\qquad$ $+$ $\qquad$ $+$ $\qquad$ $+$ $\qquad$
$\qquad$
2 Draw a model to show $6 \times \frac{1}{4}$.

3 Use the digits 2 and 3 to complete two different multiplication problems with the same product as $6 \times \frac{1}{4}$.

4 Look at the model. Tell whether each expression shows the product of $3 \times \frac{5}{8}$.
a. $\quad 5 \times \frac{3}{8}$ $\square$ Yes $\square$ No
b. $\frac{5}{8}+\frac{5}{8}+\frac{5}{8}$ $\square$ Yes $\square$ No
c. $\frac{5}{8} \times \frac{5}{8} \times \frac{5}{8}$ $\square$ Yes $\square$ No
d. $15 \times \frac{1}{8}$ $\square$ Yes $\square$ No

Solve.

5 The number line below shows $\qquad$ $\times \frac{\square}{\square}$.

6 Label the number line below and use it to show $3 \times \frac{3}{4}$.

7 Draw a model to show $3 \times \frac{4}{5}$.

8 Look at the model you drew in problem 7.
Use the digits $2,3,4,5$, and 6 to write two different multiplication problems with the same product as $3 \times \frac{4}{5}$.

9 Lisa says that $3 \times \frac{1}{6}$ and $\frac{1}{6} \times \frac{1}{6} \times \frac{1}{6}$ have the same product. Is Lisa's reasoning correct? Explain.

## Reason and Write

Study the example. Underline two parts that you think make it a particularly good answer and a helpful example.

## Example

Describe how you can use the same methods to find the product $4 \times 2$ and the product $4 \times \frac{2}{3}$.
Show your work. Use models, words, and numbers to explain your answer.

I can think of $4 \times 2$ as $\mathbf{4}$ groups of 2 .
$4 \times 2=8.8$ is 4 times as many as 2 .
I can think of $4 \times \frac{2}{3}$ as 4 groups of 2 thirds. $4 \times \frac{2}{3}=\frac{8}{3}$.
$\frac{8}{3}$ is 4 times as many as $\frac{2}{3}$.
I can find both products using repeated addition.
$2+2+2+2=8$
$\frac{2}{3}+\frac{2}{3}+\frac{2}{3}+\frac{2}{3}=\frac{8}{3}$

I can use a model to show 2
$4 \times 2=8$.

| 2 | 2 | 2 | 2 |
| :--- | :--- | :--- | :--- |

Where does the example...

- use words to explain?
- use numbersto explain?
- use models to show how the products are alike?

I can use a model to show $4 \times \frac{2}{3}=\frac{8}{3}$.
$\square$
$\square$
$\square$
$\square$
$\square$

Solve the problem. Use what you learned from the example.

Describe how you can use the same methods to find the product $2 \times 3$ and the product $2 \times \frac{3}{4}$.

Show your work. Use words, models, and numbers to explain your answer.

Did you...

- use words to explain?
- use numbers to explain?
- use models to show how the products are alike?
